Musikkmaskiner Music Machines

MUSIKKMASKINER

Her går så lita mellom en musikkinstrument og en maskin? I hvilken grad kan musikk skapes uten teknologi? Vår teknologien hemmende eller stimulerende på kreativitet? Der er noen av spørsmålene som kan oppstå i denne utstillingen.

Teknologi spiller en sentral rolle både ved produksjon, framføring og bruk av musikk. Noen har latt seg begeistre over mulighetene som teknologien gir. Andre har fryktet at musikken skulle lide, ved at maskinene tar viktige roller som skapende menneske.

Utstillingen «Musikkmaskiner» forteller om ulike historier om forholdet mellom musikk og teknologi de siste par hundre år. Historiene er knyttet til flere ulike gjenstander som angår den tiden de er skapt i og menneskene de er skapt for.

MUSIC MACHINES

Where do you draw the line between a musical instrument and a machine? To what extent can music be created without using technology? Does technology stimulate or inhibit creativity? These are just a few of the questions that are addressed in this exhibition.

Technology plays a key role in the production, performance and use of music. Some people have been enthusiastic about the possibilities afforded by technology. Others, however, have been afraid that if machines became more important than human creativity, music will be the worse for it.

The exhibition «Music Machines» has many stories to tell about the relationship between music and technology in the past few centuries. These stories are connected with many unique objects which reflect both the time in which they were created and the people for whom they were created.
